

This page contains "templates" for [Pm Wiki's](#) (:pagelist:) directive. The [Site.LocalTemplates?](#) page can be created and used to store pagelist templates that are local to a site.

fmt=#default

The default template for pagelists when fmt= isn't specified (and note that on the Pm Wiki.org wiki, this template is over-ridden by the one on the [Site.LocalTemplates?](#) page).

```
(:if false:) [[#default]] (:template
first {=$Group}:) :[[{=$Group}/]] /:
(:template each:) :
:[[{=$Group}/{=$Name}]] [[#defaultend]]
(:ifend:) (:pagelist group={=$Group}
fmt=#default count=6:)
```

[EditForm](#) [EditQuickReference](#) [GroupAttributes](#)

fmt=#bygroup

Display pages by group/name.

```
(:if false:) [[#bygroup]] (:template
first {=$Group}:) :[[{=$Group}/]] /:
(:template each:) :
:[[{=$Group}/{=$Name}]] [[#bygroupend]]
(:ifend:) (:pagelist group={=$Group}
fmt=#bygroup count=6:)
```

fmt=#simple

A simple bullet list of page names.

```
(:if false:) [[#simple]] *
[[{=$FullName}]] [[#simpleend]]
(:ifend:) (:pagelist group={ $Group}
fmt=#simple count=5:)
```

fmt=#title

A simple bullet list of page titles.

```
(:if false:) [[#title]] (:template
defaults order=title:) *
[[{=$FullName}|+]] [[#titleend]]
(:ifend:) (:pagelist group={ $Group}
fmt=#title count=5:)
```

[Auth Form](#) [Auth User](#) [Changements récents](#) [Edit Form](#) [Edit Quick Reference](#)

fmt=#titlespaced

Outputs wiki page titles with spaces between the words in the title.

```
(:if false:) [[#titlespaced]] (:template
defaults order=title:) *
[[{=$FullName}|{=$Titlespaced}]]
[[#titlespacedend]] (:ifend:) (:pagelist
group={ $Group} fmt=#titlespaced count=5:)
```

fmt=#group

A bullet list of groups.

```
[[#group]] (:template first {=$Group}:) * [[{=$Group}/]] [[#groupend]]
```

fmt=#include

Concatenate the text of pages in the list. (Note, this can be an expensive operation!)

```
[[#include]] (:include {=$FullName} self=0:) [[#includeend]]
```

fmt=#includefaq

Include just the #faq sections from pages in the list. (This can also be expensive, especially if the list includes pages that don't have the [[#faq]] anchor!)

```
[[#includefaq]] !![[{=$FullName}|+]] >>faq<< (:include {=$FullName}#faq#faqend  
self=0:) >><< [[#includefaqend]]
```

fmt=#description

List pages and append the page's description if it exists. Creates dash by all names, but adding a nested loop to get rid of it causes markup problems (nested loops are not allowed).

```
(:if false:) [[#description]] *
[[{=$FullName}|+]] - {=$Description}
[[#descriptionend]] (:ifend:) (:pagelist
group={ $Group} fmt=#description count=7:)
